

If you are intending to qualify some athletes, please read completely.

All results will come from uploaded FAT performances onto athletic.net. This is nothing new, but with it now being the fifth year, and the size/interest the meet receives, we can no longer field random questions on how to upload times or get qualifying marks.

There are many meets throughout the state that are timed with FAT and software that is creating an uploadable file for results. We do not have the staffing to respond to daily requests to post an individuals time manually.

Here are a few bullet points and comments regarding how to go about this process -

If a meet is being auto-timed, there is software being used to manage and score the meet. No matter who the timer is (company or school individual) that software creates the same type of Upload File. What entry site a company uses (athletic.net or MileSplit or Direct Athletics, etc.) has NO BARING on posting results. Those mentioned entry sites are just entry sites and also allow for results to be posted. However, the software the timer/school uses is totally unrelated to those sites and can definitely create a results file to upload on to ANY of these results platforms. In this case, Athletic.net is where the results need to be posted.

Before going to your meets - reach out to the host and request that results are posted to athletic.net or request the host get the results file from the timing source and you can upload results or forward the respective file to us and we will get the meet results posted. WE WILL ONLY UPLOAD FULL MEET FILES.

If a host or timing company tells you they cannot get you the file, they are simply avoiding work. If a host school says they can't get a results file, then I would recommend hiring a different company as you are paying the company to time/work your event. You own that results file.

If you are hosting a middle school meet that will be using FAT - please consider posting it on my website if you are willing to allow extra individuals from other schools into your meet for additional opportunities to qualify.

If you are interested in hosting a "qualifiers meet", please contact me and we can see about getting it timed for you and then post the meet for schools/individuals from schools to consider. If you hosted something like this, I would suggest even just doing running events only since the FAT is maybe a lesser opportunity during some teams season. The field events get measured the same at all of the meets so it is less needed of an opportunity.

When setting up a meet on athletic.net PLEASE BE CONCIENCIOUS of the hurdle heights when setting up those respective events. They should be at 30". For the shot put, the girls as well as 6th grade boys will throw 6 pound shot puts. The discus is the same for all levels - 1kg

If you are hosting a meet or attending a meet - they may not throw 6 pound. That is your responsibility to see if the competition would work with you on that. It is different throughout different portions of the state. We have found more 6 pound meet/opportunities and that is why we stay with that. PLEASE watch results if you are uploading any for the shot put. If you throw 8 pounds and you are not paying attention and it uploads under the 12 setting. The performance does not show in the 8 pound qualifying section. Similarly, if you upload hurdles under 36 or 39 inches - that is where they will be. Therefore they will never get considered for the 30" competition.

If you have read this far, thank you. Again, FAT times, Uploaded Complete results posted. Very simple and I am willing to upload every meet that exists in WI if you send me the meet results in a "semi colon delimited results file format". Any timer will know how to create this file in their scoring software.
